Portfolio | LinkedIn | GitHub

SUMMARY

Full Stack Developer with 1.5+ years of experience building scalable, real-time SaaS systems using NestJS, Node.js, Next.js, PostgreSQL, and MongoDB. Shipped HIPAA-aligned healthcare platform with 400+ subscriptions and \$5k+ MRR. Experienced in RBAC systems, Stripe billing pipelines, WebSocket-based real-time features, and AWS deployments. Built RAG-based AI document platform using FastAPI, LangChain, and Next.js.

SKILLS

Languages: JavaScript, TypeScript, Python, GO, SQL

Backend: Node.js, NestJS, Express, FastAPI, Django

Frontend: React, Next.js

Databases: PostgreSQL, MongoDB,

Cloud/DevOps: AWS EC2, Docker, Nginx, CI/CD, GitHub Actions

Systems: RBAC, Multi-Tenant, WebSockets, Event-Driven Systems, 2FA, Encryption

Integrations: Stripe, Firebase, Google Maps API, Webhooks, OpenAI API

Developer Tools: Git, GitHub, SSH, Postman, Linux, Bash, Docker

EXPERIENCE

Full Stack Developer, Nessfi Tech Pvt. Ltd.

Aug 2024 – Present

- Built modular backend systems using NestJS + PostgreSQL for multi-tenant SaaS platforms
- Designed subscription-aware RBAC enabling feature control across tenant plans
- Implemented WebSocket-based real-time communication for chat and live updates
- Integrated Google Maps APIs for routing, tracking, and ETA computation
- Engineered Stripe billing system with webhook handling and retry logic
- Developed 2FA and device-based session control for secure authentication
- Deployed systems on AWS EC2 with Nginx and automated CI/CD pipelines
- Mentored 2 junior developers on clean code practices, reusable architecture, and feature development standards

PROJECTS

Taxificent – Ride Management SaaS Platform

backend.taxificent.ai

- Built full-stack ride management SaaS platform using NestJS, PostgreSQL, and Next.js
- Designed end-to-end trip lifecycle including booking, dispatch, tracking, and completion workflows
- Developed real-time chat using WebSockets and push notifications using Firebase Cloud Messaging (FCM)
- Architected subscription-based RBAC system enabling feature control across company plans and user roles

DAHN – Healthcare Platform (HIPAA-Aligned)

getdahn.com

- Built secure healthcare system with RBAC, encryption, and audit logging
- Implemented AES-256 encryption for patient data stored at rest
- Designed 2-device login restriction and 2FA authentication system
- Engineered Stripe subscriptions with retry mechanism for failed renewals

Neuropage – Personalization Engine

neuropage.io

- Built backend pipeline generating personalized landing pages per lead using Node.js
- Designed webhook APIs integrating Bubble.io workflows with backend services for automated lead processing
- Implemented dynamic webpage rendering using JavaScript injection in Webflow based on lead-specific data
- Developed fault-tolerant execution with validation, structured logging, and reliable job handling

DocuAI-Pro – AI Document Chat Platform

GitHub

- Built RAG-based system enabling natural language queries over PDFs
- Designed pipeline: chunking → embeddings → vector search → LLM response
- Integrated FAISS/ for sub-100ms semantic retrieval
- Developed FastAPI backend and Next.js frontend with Docker deployment

EDUCATION

MCA, Chandigarh University

2022 – 2024

B.Sc, KDCM Govt. College

2018 – 2021
